

I CLAIM:

1. A book holder comprising:
a housing including a chamber formed therein,
a rotary member rotatably received in said chamber of said
5 housing, and including a plurality of holes formed therein,
a pole including a lower portion secured to said rotary member,
and including an upper portion, and
a plate secured to said upper portion of said pole, and including
a plurality of holes formed therein and facing toward said holes of
10 said rotary member, for receiving shanks of books, and for allowing
the books to be rotated relative to said housing in concert with said
rotary member.
2. The book holder as claimed in claim 1, wherein said housing
includes a weight disposed therein, to rotatably receive and support
15 said lower portion of said pole.
3. The book holder as claimed in claim 2, wherein said weight
includes a space formed therein to rotatably receive said lower
portion of said pole, and a bearing received in said space of said
weight and engaged onto said lower portion of said pole, to
20 rotatably attach said pole to said weight.
4. The book holder as claimed in claim 2, wherein said housing
includes a bottom board, said weight is secured on said bottom
board.
5. The book holder as claimed in claim 1, wherein said rotary
25 member includes a noncircular center aperture formed therein, said
pole includes a noncircular segment provided in said lower portion
thereof and engaged in said noncircular aperture of said rotary

member, to allow said pole to be rotated in concert with said rotary member.

6. The book holder as claimed in claim 5, wherein said rotary member includes a space formed therein and communicating with
5 said aperture thereof, to receive said lower portion of said pole, and a fastener received in said space of said rotary member and threaded with said lower portion of said pole, to solidly secure said lower portion of said pole to said rotary member.

7. The book holder as claimed in claim 1, wherein said housing
10 includes an opening formed therein and defined by a peripheral flange, said rotary member includes a bulge extended upwardly therefrom to form a peripheral shoulder therein and to rotatably receive said peripheral flange of said housing, and to rotatably and stably secure said rotary member in said chamber of said housing.

15 8. The book holder as claimed in claim 1, wherein said plate includes a noncircular center aperture formed therein, said pole includes a noncircular segment provided in said upper portion thereof and engaged in said noncircular aperture of said plate, to allow said plate to be rotated in concert with said pole.

20 9. The book holder as claimed in claim 8, wherein said pole includes a threaded portion provided on said upper portion thereof, and a fastener threaded to said threaded portion of said pole and engaged with said plate, to secure said plate to said pole.
